

UVic and UBC Symbioses-LEAD Lab Update

OSCAR Con 2014
Morgan Price, Jens Weber

Who are we?

Seek to leverage our
academic connections.

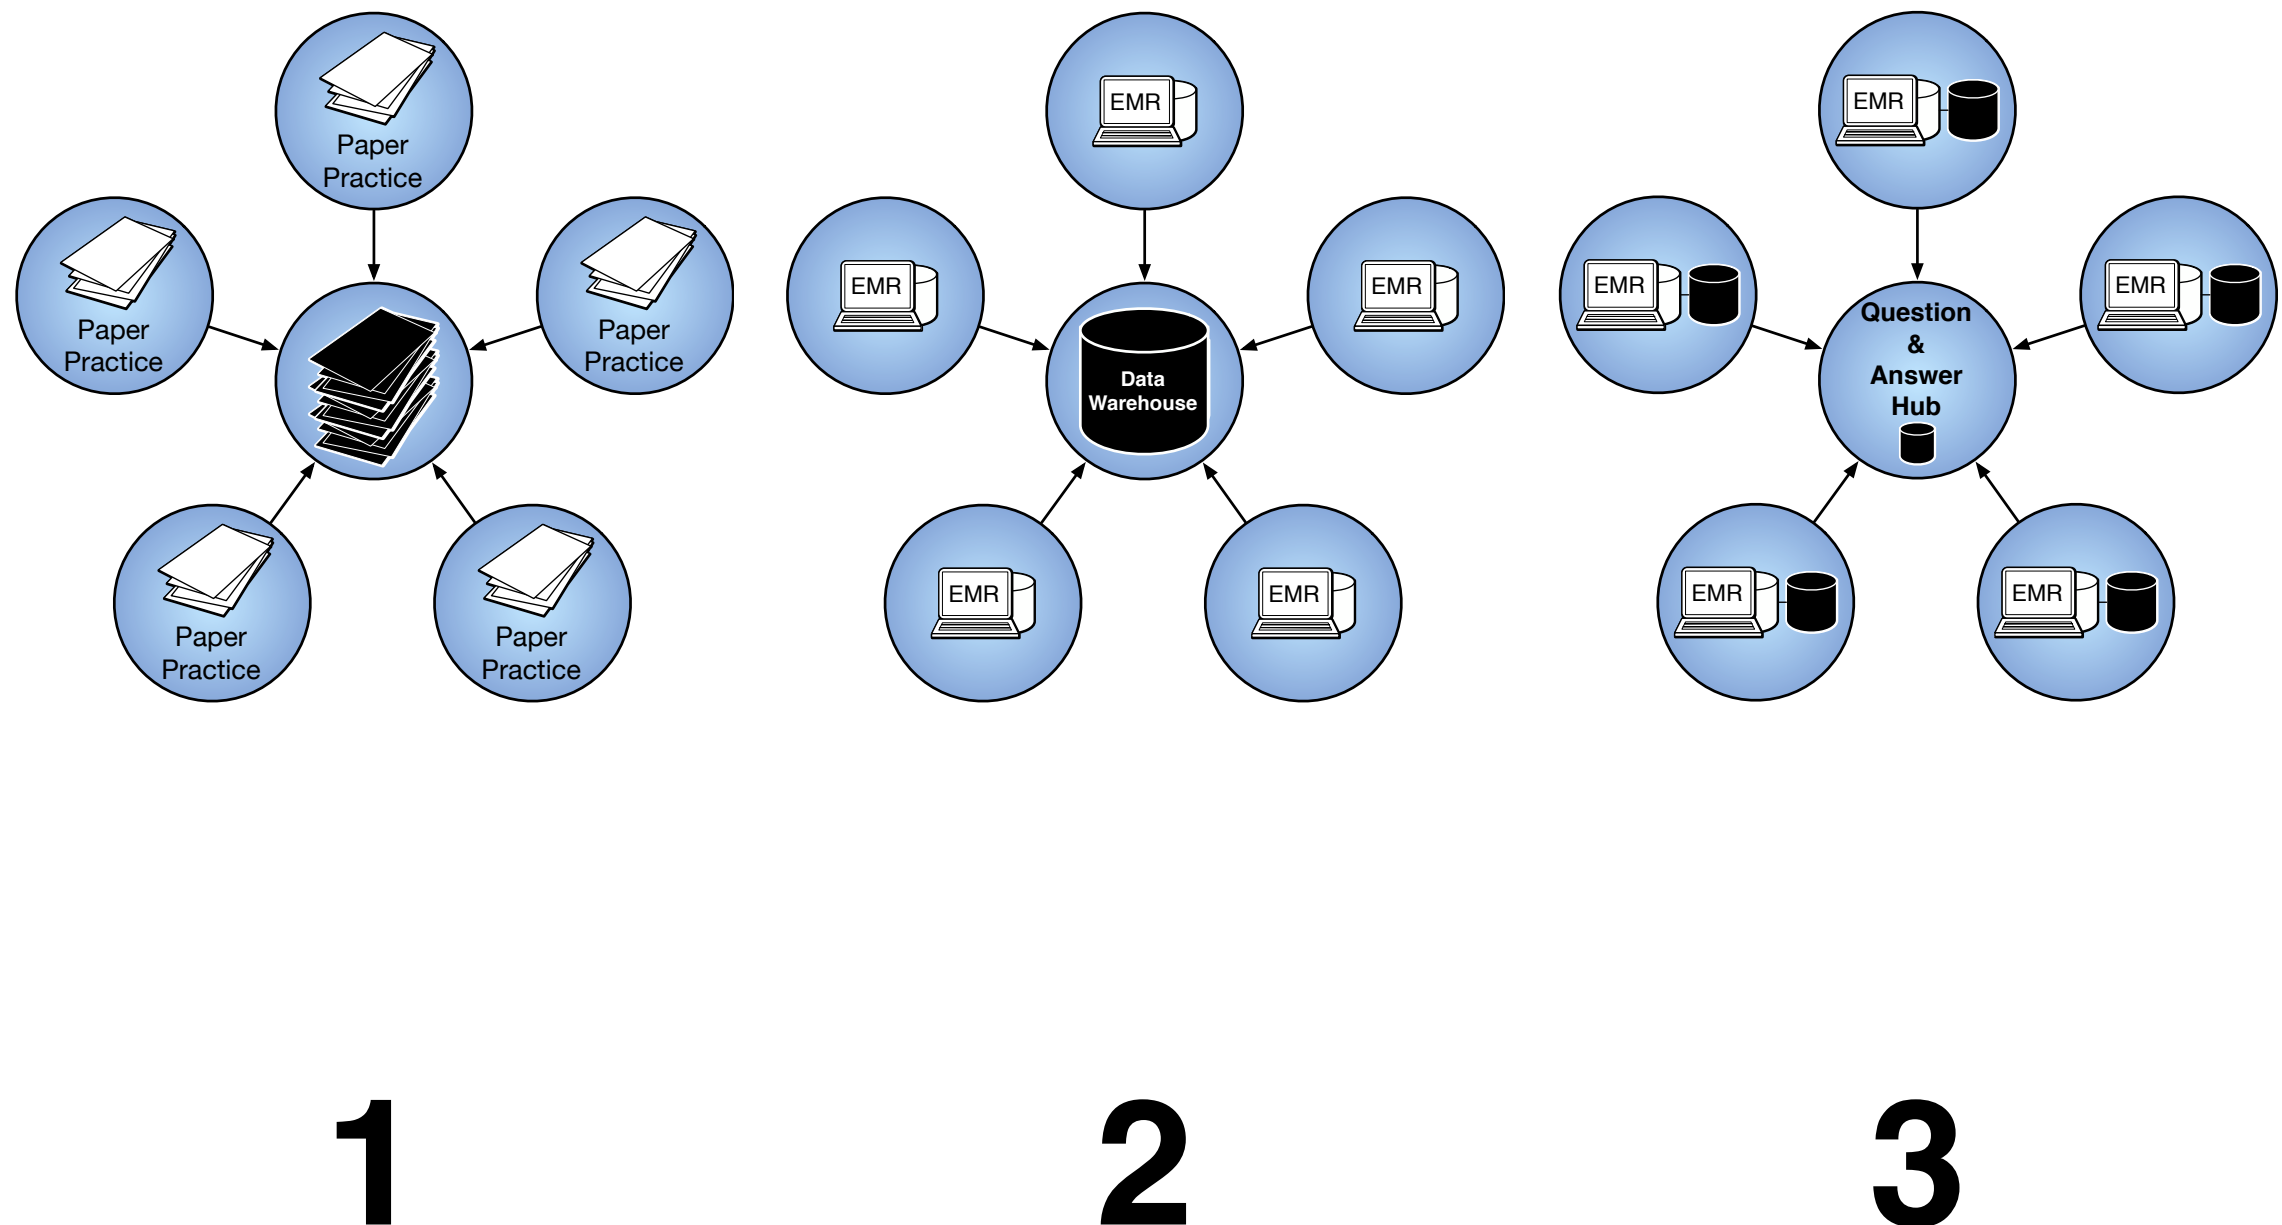

Target studies that
have real application.

We have been
working on a number
of R&D projects.

SCOOP Network

A Primary Care
QI and Research Network with
Physicians Data Collaborative.

Designing a 3rd Generation Primary Care Network

Designing a 3rd Generation Primary Care Network

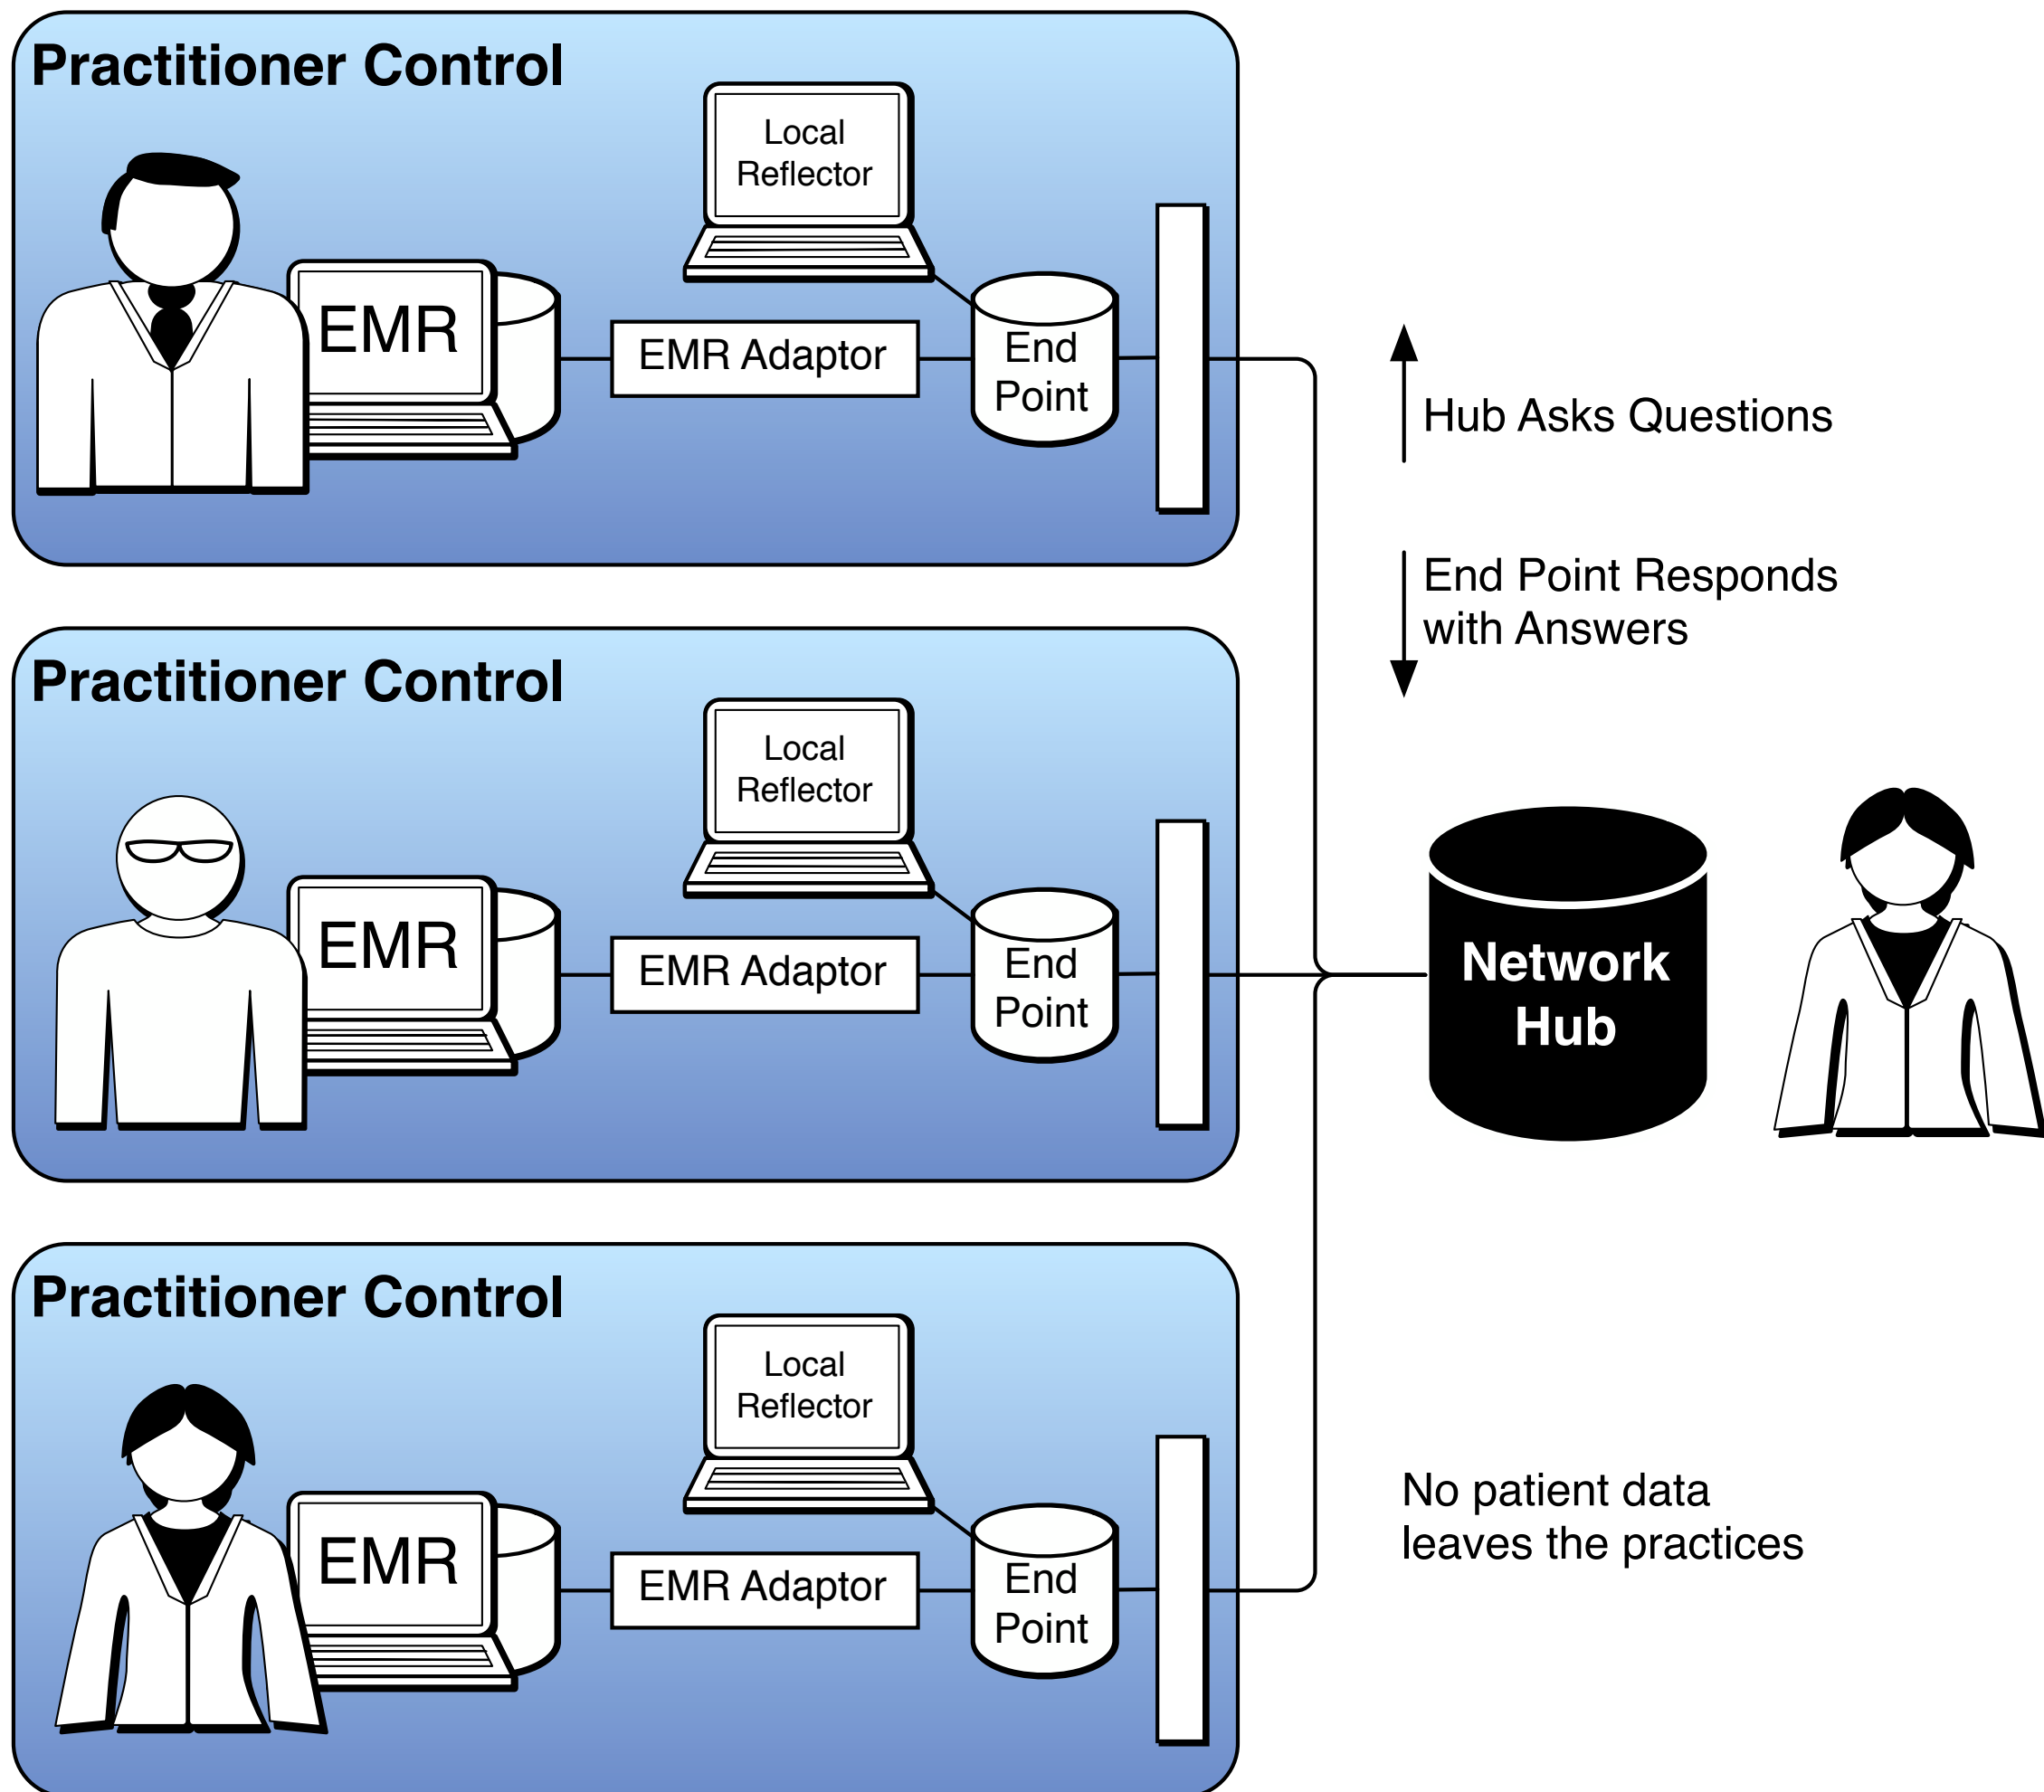

1

2

3

Our test study looked at
Polypharmacy in EMR.

Working with the
Physicians Data
Collaborative of BC.

Have been working with
open source tools for
visualizing results.

Helping with Know2Act

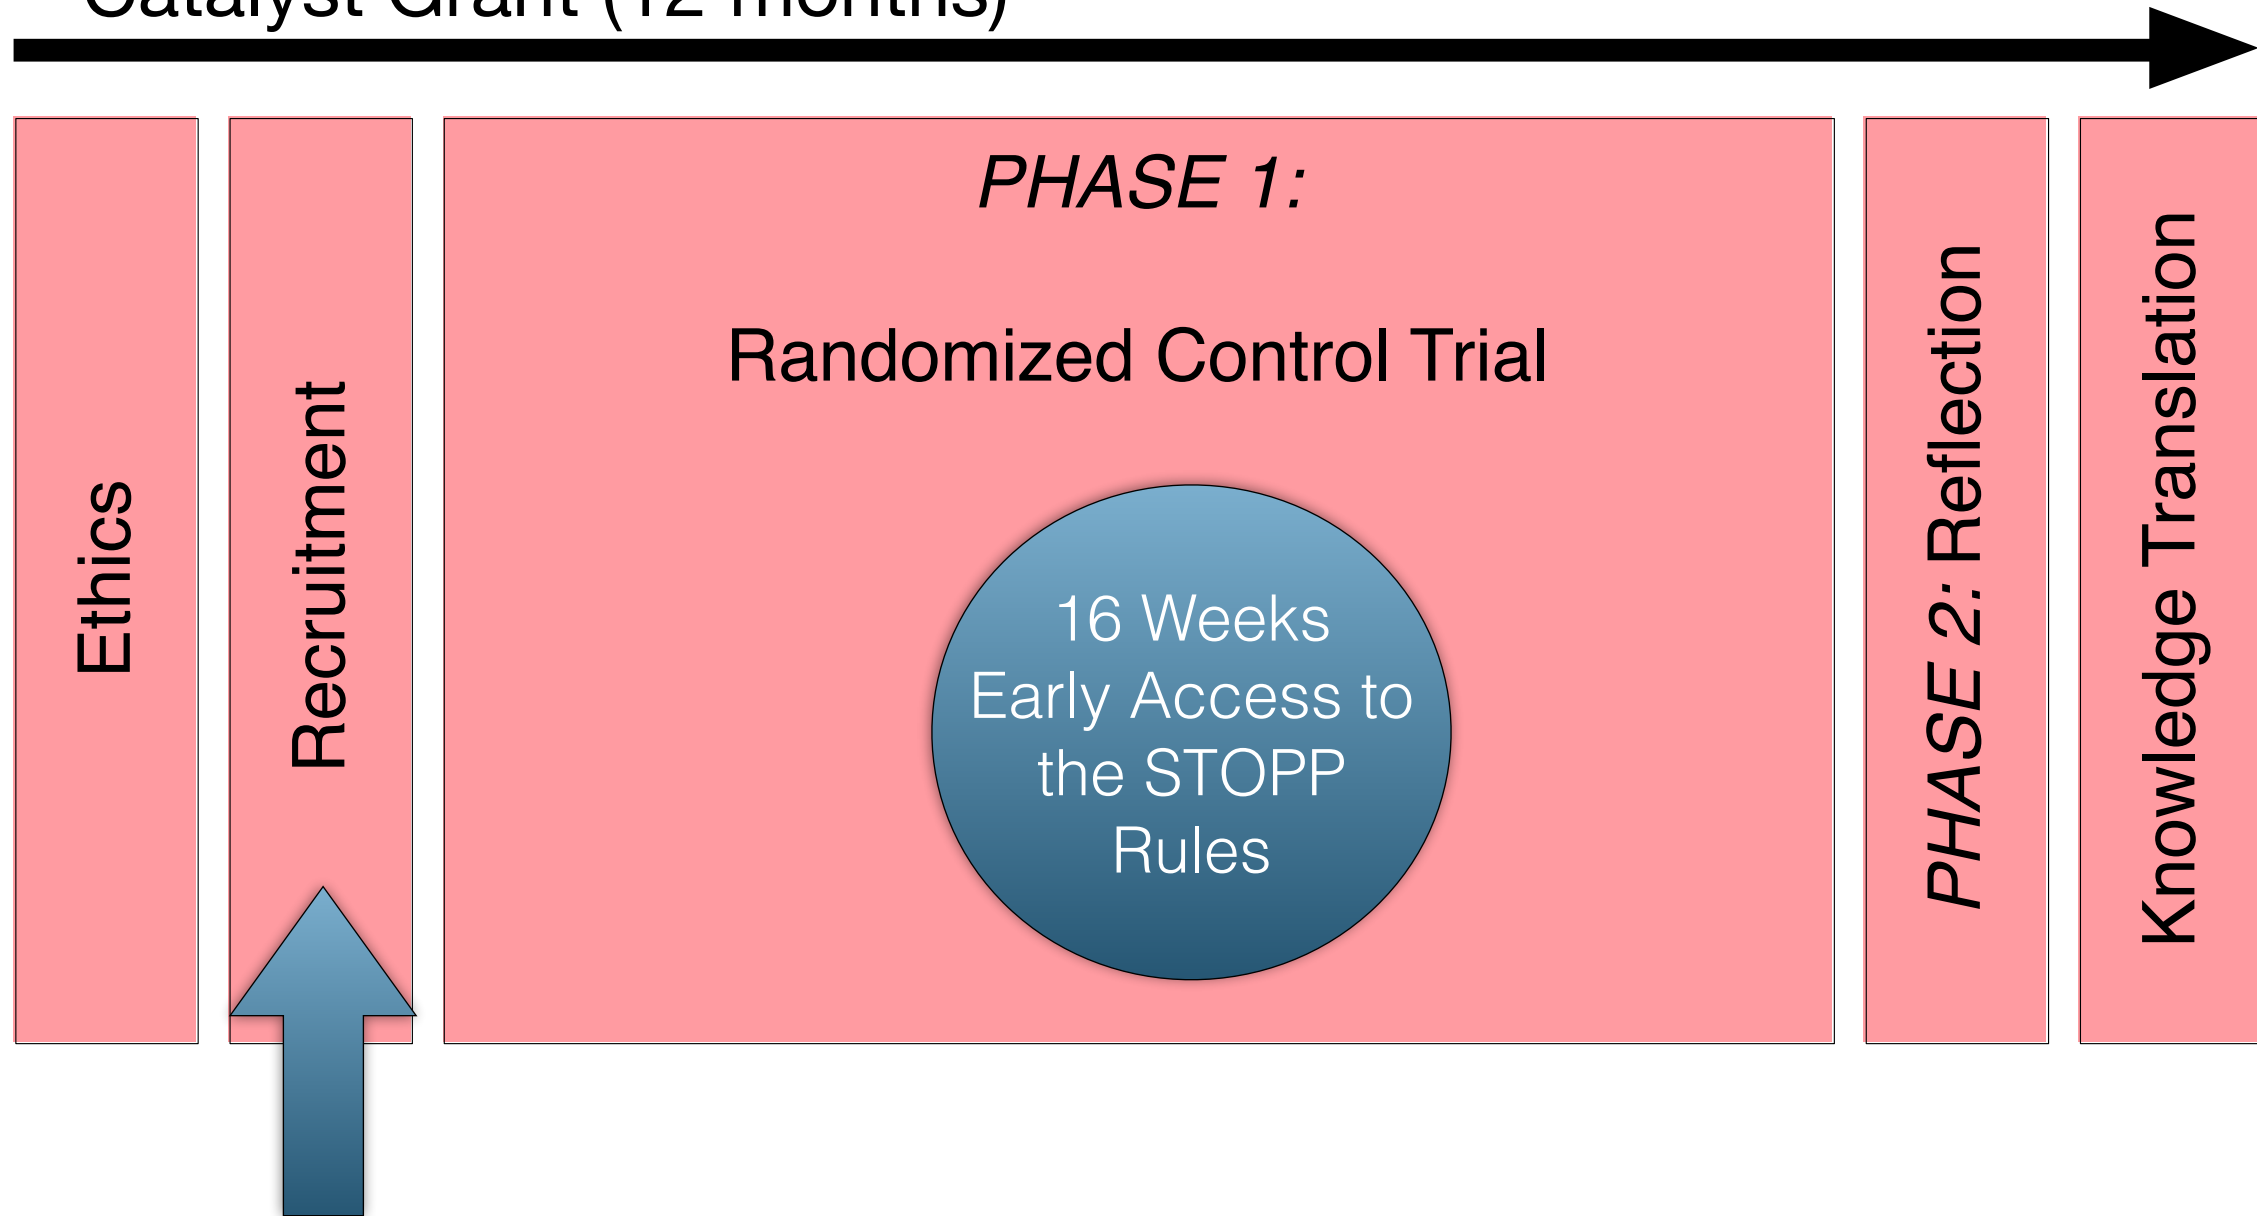

Worked with OSCAR EMR and McMaster to review and build guidelines for Know2Act.

Translated STOPP criteria
into Know2Act rules.

STOPP Study

Study to assess impact of STOPP
criteria on prescribing using
MyDrugRef / Know 2 Act in
OSCAR.

Catalyst Grant (12 months)

We are right here.

If you get involved, we will use the new SCOOP network so no patient level data leaves your office.

Compensation for your
practice and your OSP.

Phase 2 - Focus Group

at the end to help us
understand the results.

If you are an OSCAR 12.1
user who is interested in
participating...

... please come see us.

**The STOPP Clinical Decision Support Study
Recruitment Letter**

You are invited to participate in a study entitled "**A mixed-method study to explore, assess, and explain the translation of a complex set of evidence-based rules into practice through electronic medical record based decision support: how can STOPP effectively be deployed in primary care**". This study will explore the impact of using decision support in your OSCAR EMR on physician-prescribing patterns.

We invite you to participate in this study if you are an OSCAR 12 user and have been using the EMR in your practice regularly for the last year to document care, including prescriptions. We hope - with your participation in this study - that we will better understand how decision support can help improve prescribing. Your participation will help increase our knowledge on use of prescribing reminders / suggestions in primary care and will help directly improve the open source OSCAR EMR.

There are two phases to this study. Your participation in **phase 1** will consist of reviewing consent and agreeing to be randomized to an intervention or control group. For 16 weeks, the intervention group will receive decision support suggestions at the point of care targeted at potentially inappropriate prescriptions in patients 65+ years of age. At the end of the 16 weeks, all participants will receive the decision support suggestions, if they wish. We will evaluate prescribing patterns related to these rules by installing a small server in your practice (in the EndPoint) and the data. **No patient data will leave your practice.** Result 2: 2 /

Results of this study will go towards supporting OSCAR, Know2Act, and publications will be sought.

Natural Language Processing and OSCAR

Testing several approaches
of how to help extract data
from text in OSCAR.

Imagine receiving a Discharge
Summary or Consult and being
able to reconcile medications
quickly

Suggested Medications

Update

atenolol - TENORMIN - tablet - DOSE 50mg - oral
- daily

Add

warfarin - COUMADIN - tablet - DOSE 10mg - oral
- daily

Update

asa - ASPIRIN - tablet - DOSE 81mg - oral - daily

Add

predisone - DELTASONE - tablet - DOSE 5mg -
oral - twice daily

Current Medications in OSCAR

atenolol - TENORMIN - tablet - DOSE 25mg - oral -
twice daily

asa - ASPIRIN - tablet - DOSE 325mg - oral - twice daily

Notification		

Dear Dr. Ian Medic,

You have been identified as the family doctor/primary care provider for the above patient who has been admitted to this facility.

If you have a practice within the Island Health Region, the most current information about your patient can be viewed in PowerChart at any time, including current location. If you have any additional clinical information that could help provide care for your patient while in hospital, as well as help plan for his/her transition back into the community, please call the Royal Jubilee Hospital - Acute Care site at: 250-519-1630 to obtain the name and contact details of the Most Responsible Physician for your patient.

The attending physician may want to contact you. The contact details Excelleris has on file for you are:

Office primary: (604)658-2107

Fax:

Please contact Excelleris if your contact information above is incorrect. Excelleris can be reached at:

Phone: 1-866-728-4777

Email: support@excelleris.com

Release 12_1 - build 962.

This has everything we have done on
Excelleris that has been approved.

BC billing bug fixes.

Added ICBC as a billing
option to Invoice screen

WCB forms now show in
the correct, amended
order.

End of Life eForms

A study to help get EoL tools
and best practice into the
EMR.
